Asynchronous Activity 2 Student Early Warning Tool Using KNIME

This repository contains the required output for Asynchronous Activity 2. The KNIME workflow predicts whether a student is **At Risk** or **On Track** using academic performance and engagement data.

Files

- DemoEarlyWarningTool.knwf - exported KNIME workflow
- student_performance_knime.csv - dataset used by the workflow
- Mabalot_Maersk_Harner_KNIME_GitHub_Evidence.pdf - step-by-step activity evidence

Algorithms

- Decision Tree
- Logistic Regression
- Random Forest

8 KNIME Workflow Structure Check

The exported workflow archive was opened and its XML structure was reviewed. This is a file-structure check and does not claim a live KNIME execution result.

Check	Recorded result
Archive XML	Parsed successfully
Nodes	13
Connections	15
Learner input	Training partition
Predictor input	Test partition
Target leakage node	Removed
Optional diagnostic nodes	Removed
Target field	risk_status
Prediction field	Prediction (risk_status)
Result	Passed

Evidence record 6. The exported KNIME file contains the expected connected workflow structure and uses separate training and test partitions.
